Art Unit: 1731

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

- i. method wherein the mask is formed with a vacuum jig and paraffin balls;
- ii. method wherein the mask is formed by piercing a sheet and immersing in liquid paraffin;
- iii. method wherein the mask is formed with a photo-curing resin

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

- Species i, claims 2-4;
- Species ii, claims 5-6;
- Species iii, claims 7-8;

Art Unit: 1731

The following claim(s) are generic: 1.

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons:

Species i is directed to a method which has the special technical feature of a vacuum jig not shared by species ii or species iii.

Species ii is directed to a method which has the special technical feature of piercing a sheet not shared by species I or species iii.

Species iii is directed to a method which has the special technical feature of a photo-curable resin not shared by species I or species ii.

4. During a telephone conversation with Robert Wieland on December 12, 2002 a provisional election was made with traverse to prosecute the invention of species i, claims 1-4. Affirmation of this election must be made by applicant in replying to this Office action. Claims 5-8 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

5. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1731

6. Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Where a claim sets forth a plurality of elements or steps, each element or step of the claim should be separated by a line indentation. See 37 CFR 1.75(i). See MPEP 608.01(m).

In claim 2, line 7, the phrase “the predetermined cells” has no antecedent basis.

7. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

8. Claim 1 is rejected under 35 U.S.C. 102(b) as being clearly anticipated by Oyobe et al. (4,519,820).

Oyobe et al. Teaches a method of producing a ceramic body having a construction of alternately plugged cells by : filling plugging material (i.e. wax) into cells; immersing an end face of the honeycomb body into a plugging slurry; drying and sintering the plugged honeycomb body such that the plugging material (i.e. wax) is removed.

9. Claims 2-4 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, second paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Art Unit: 1731

10. The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record does not teach or suggest a method of producing a ceramic honeycomb body having plugged cells wherein the plugging mask is formed by using suction jig to place paraffin balls in the honeycomb body as substantially set forth in the claims.

11. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The cited references teach method of plugging channels of ceramic honeycomb bodies.
